

## Heavy Duty Castors Directional Lock -160mm Polyurethane Castor Wheel 160-5000-SUB/D

Directional Lock added to our 160mm polyurethane castors. Directional lock is a way of making a swivel castor into a fixed castor temporarily - by locking the swivel head but not the wheel which means castor moves in one direction. Directional lock castors are great for cornering or pivoting. Can be added to just one trolley wheel - usually front left of the trolley if left cornering or front right if right cornering.
